LADP@

Write a Python program mario that prints two adjacent pyramids of # characters separated by two spaces, with the height chosen by the user. Prompt exactly with Height: and re-prompt until an integer 1–8 is provided. The output should contain height rows where each row shows a left pyramid, a two-space gap, and a mirrored right pyramid, aligned vertically, with no trailing spaces on any line.

Example (Height = 4)

```
Height: 4
   #  #
  ##  ##
 ###  ###
####  ####
```
