LARP1

Write a Python program mario that prints a right-aligned staircase made of # characters whose height is chosen by the user. Prompt the user exactly with Height: and keep re-prompting until they enter an integer from 1 to 8 (inclusive). The output must contain that many rows, aligned to the right using spaces so the top row has one # and the bottom row has height #, with no trailing spaces on any line.

Example (Height = 4)

```
Height: 4
   #
  ##
 ###
####
```
