Programming Assignment – Proteus

Write a Python program **Proteus** that prints two adjacent pyramids of the character '+', separated by two spaces. The height is fixed in the program (e.g., height = 4). The output should contain exactly height rows, where each row shows a left pyramid, a two-space gap, and a mirrored right pyramid, aligned vertically, with no trailing spaces.

Example Output:

```
   +  +
  ++  ++
 +++  +++
++++  ++++
```
