Programming Assignment

Pattern Problem 1 – Ascend

Write a Python program **ascend** that prints a right-aligned staircase made of the character '*'. The height is fixed in the program (e.g., height = 5). The staircase must contain exactly that many rows, aligned to the right using spaces so the top row has one '*' and the bottom row has height '*'s, with no trailing spaces on any line.

Example Output:

```
    *
   **
  ***
 ****
*****
```
