Programming Assignment

Pattern Problem 3 – Zenith

Write a Python program **zenith** that prints a centered pyramid made of the character '@'. The height is fixed in the program (e.g., height = 6). The pyramid must contain exactly height rows, where the first row has one '@' centered at the top, the second row has three '@', and so on, increasing by two each row, forming a symmetric pyramid with no trailing spaces on any line.

Example Output:

```
     @
    @@@
   @@@@@
  @@@@@@@
 @@@@@@@@@
@@@@@@@@@@@
```
