Practice Problems

1. Print the numbers 1 through a number N in a for loop, separated by new lines.
2. Print the character ‘*’ a number N amount of times on one line.
3. Print whether a number N is even or odd.
4. Convert a negative number into a positive number. If the number is already positive, leave it unchanged. If the number is zero, print “Invalid.”

Example Outputs:

1) print_range(5)

```
1
2
3
4
5
```

2) print_repeats(6)

```
******
```

3A) print_even_or_odd(9)

```
Odd
```

3B) print_even_or_odd(4)

```
Even
```

4) convert_negative_to_positive(-7)

```
7
```
